## TNM Classification of Malignant Tumours SEVENTH EDITION

Edited by **LESLIE SOBIN**, **MARY GOSPODAROWICZ** and **CHRISTIAN WITTEKIND**

The TNM system is the most widely used means for classifying the extent of cancer spread. *TNM Classification of Malignant Tumours, 7<sup>th</sup> Edition* provides the new, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this pocket guide contains important new and updated organ-specific classifications that oncologists and other professionals who treat patients with cancer must use to adequately classify tumours for prognosis and treatment.

The major alterations addressed in the 7<sup>th</sup> Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin carcinoma, and prostate. There are several new classifications: gastrointestinal carcinoids (neuroendocrine tumours), gastrointestinal stromal tumour, upper aerodigestive mucosal melanoma, Merkel cell carcinoma, uterine sarcomas, intrahepatic cholangiocarcinoma, and adrenal cortical carcinoma.

A new approach has also been adopted to separate stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings as well as the traditional anatomic groupings are presented for oesophagus and prostate.
