Welcome to the UICC Annual Report for 2015. I have had the privilege to be the President of UICC during a year of significant progress on many fronts. Together with my Board, the Geneva team, our members and partners, we can look back at 2015 and be proud that cancer gained the recognition it deserves as a global health and development imperative.

In September at the United Nations General Assembly, I was delighted to see that all countries agreed to include cancer and the other non-communicable diseases (NCDs) in the Sustainable Development Goals (SDGs). This means that for the first time, cancer and the other NCDs have been recognised as significant global challenges which demand the attention of all countries, and in particular in low- and middle-income countries, where we anticipate the majority of cancer cases to occur in the next fifteen years.

The UICC Board takes its purpose statement very seriously and placing cancer in the SDGs shows that through working with colleagues across the NCD Alliance and our membership base in over 150 countries, we can collectively leverage global policies which change the way in which cancer is addressed in all countries. The challenge we will face in the coming years is converting those commitments into action at a national level.

However, I am confident that we are in a good position to see this happen. UICC has grown from 340 members to nearly 1,000 members in only six years. And that membership base is more interactive and cohesive than at any other time in the past. We therefore have the ability to mobilise action in all countries, pressing home recent global wins into real and funded plans which governments will implement and report progress on.

Our reach and impact is greater than it has ever been and I am hopeful that we can capitalise quickly on the momentum achieved at the various UN meetings in which cancer has been positioned as a global issue requiring immediate and sustained action to resolve.
There is much to be proud of in 2015, but let me highlight a few key achievements which I consider to be worthy of note:

1. UICC is a founding member of the NCD Alliance and for the last three years, through our CEO, Cary Adams, we have been the Chair of the Steering Group. During that time the Alliance has grown from four to seven organisations and the number of supporters has increased impressively. The Alliance is now financially sound and through the leadership of Katie Dain, a new five-year strategic plan has been agreed, improvements in governance implemented and a new Memorandum of Understanding has been signed which commits all parties to a further three years working together. I am proud that we have handed over the Chair of the Steering Group role to Jose Castro from the International Union Against Tuberculosis and Lung Disease (The Union) at a time of growth and increased impact. UICC will continue to be a great supporter of the NCD Alliance.

2. For the first time in many years, the Essential Medicines List (EML) at the World Health Organization (WHO) was revised to include a further 16 cancer drugs on top of the existing 30. By any measure, this was a significant result and I am proud of the way in which UICC, its members and partners worked diligently over the past few years to assist the World Health Organization (WHO) in reviewing the list. The challenge now is to ensure that all countries take this lead and increase the drugs available to treat cancer patients in their own populations.

3. In November, the World Cancer Leaders’ Summit took place in my home country, Turkey. 250 of the world’s leaders in health met to discuss how we can work together as collaborators and in partnership to impact cancer control globally, regionally and nationally. We were fortunate to have many impressive speakers and I was honoured to welcome the Turkish Minister of health to that event. The Summit is an impressive opportunity for our leaders to meet and agree ways in which we can address cancer in a coordinated fashion around the world.

At the end of 2015, we conducted a membership research project to understand how well UICC is doing in comparison to previous years. The results were reviewed by the UICC Board of Directors in November and we were delighted to see that our members are positive about the organisation and willing to contribute more to the agenda we have set out for the next few years for the organisation. It was particularly exciting to learn that 90% of our current members would recommend the UICC membership to other cancer organisations, up from 67% in 2013 when we last conducted the membership survey.

I am proud to be the President of an organisation which has such positive responses from its members.

We are now entering a new planning cycle for UICC. It covers the period 2016-2018. We will continue to organise ourselves around three key themes – convening, capacity building and advocacy – but we will give greater focus to our ability to help UICC members do better tomorrow than they can do today.

Our new Capacity Building team will reach out to members to support their training and education needs, their resourcing, skills and capabilities and deliver a suite of online services which help them run their organisations more effectively and efficiently. We are very hopeful that this will be received positively by all members, and in particularly those in low- and middle-income countries where the need is greatest.

Let me conclude this message by thanking the Board of Directors for their commitment throughout 2015. Every member of the Board takes on a leadership role in UICC and is an active participant in the governance of a growing organisation. I would like to thank Mary Gospodarowicz, the Immediate-past President, and Sanchia Aranda, our President Elect who have helped me lead this great organisation. Of course, the work of UICC is undertaken by our CEO, Cary Adams and the wonderful team in Geneva who drive forward our mission with such professionalism, energy and commitment. Although the Geneva team is small, it certainly produces a lot of output and always of the highest quality. On that note, the Board was proud to see Cary Adams awarded ‘CEO of the Year’ at the Annual Associations World Congress in May – appropriate recognition for his achievements during the last six years at UICC.

I conclude by wishing you all well in 2016. I hope that many of you will be at the 2016 World Cancer Congress which will open on 31 October in Paris, a city which will always be special and gracious to those who visit.

Tezer Kutluk, President
Union for International Cancer Control (UICC)
It is with considerable pride that I write my seventh UICC Annual Report message. Each year I start by recognising the growth in the membership base, the increasing number of partners we work with, the significant achievements of the year and of course, I recognise the Board and staff who work so diligently to deliver a suite of initiatives which collectively impact cancer around the world. This year however, I am going to extend my commentary to include the progress we have made over the last six years, to properly reflect on that progress and set out the high-level agenda which we will pursue in the coming years.

Since 2009, UICC has grown in several important and interlinked dimensions. Probably most importantly, we have increased our membership base from 340 to nearly 1,000. Not only have our membership figures increased, but the percentage of members who we would consider active in supporting or working with UICC has increased dramatically to more than 40%. This means we have been able to keep the UICC Geneva Team to less than 30 while delivering a larger volume of work at a higher quality due to the active participation of volunteers from across UICC’s membership base. We have been privileged to work with and be inspired by the best in the global cancer community.

Critical to our success has been the growth in the number of partners who have supported UICC’s plans with funding and other resources. We have increased our partner base from 9 to 52 - comprising a mix of cancer organisations, foundations and private sector companies. They have fuelled an accelerated programme of work, given us the means to deliver output of the highest quality and they have been great ambassadors for our advocacy messages and participants in our major events.
MESSAGE FROM THE CEO

World Cancer Day is now one of the largest health days of the year and we believe that it will grow organically from now on, given so many organisations have marked 4 February in their diaries and are integrating it into their own plans. The World Cancer Congress has grown from 1,700 delegates in Shenzhen in 2010 to more than 2,700 in Melbourne in 2014 and we anticipate at least 3,500 delegates will join us in Paris this coming October. Because we have listened intently to the views, ideas and perspectives of our members, we have been able to design and deliver a Day and a Congress which meet the requirements of our growing membership base.

From an advocacy perspective, 2015 marked the culmination of six years of work with our NCD Alliance colleagues and UICC members who have shared an ambition to place cancer and the other non-communicable diseases (NCDs) on the global health and development agenda.

I vividly remember meeting Ann Keeling, the then CEO of the International Diabetes Federation (IDF), who articulated an ambitious plan to secure a high-level UN Meeting on NCDs and to ensure that NCDs were included in the replacement Millennium Development Goals in 2015. The NCD Alliance at that time comprised only UICC, IDF and the World Heart Federation. It had no staff and only a sketchy plan on how this ambition could be delivered.

Six years later and we can be proud to have played such a pivotal role in securing the UN High-level Meeting on NCDs in 2011 and the progress since, with NCDs included in the Sustainable Development Goals 2016-2030. Quite rightly, Tezer Kutluk highlights this achievement as a game-changing one for cancer around the world. Without doubt, the last six years have been wonderfully successful for our community. The challenge we face now is to capitalise on those global commitments at a national level, and this is where UICC members will play a critical role in the next few years.

Underpinning our progress since 2009 has been attention to organisational efficiency. We have addressed our governance model, improved our programme management processes, become more effective in conflict of interest management, developed a partnership philosophy which engages our partner base in our long-term plans and the World Cancer Congress has grown through rapid change. We are proud to have worked with the Board and the team in Geneva to guide it through this time of change.

In the last few years, we have been honoured to have had strong Boards of Directors, ably led by a series of outstanding individuals as Presidents - David Hill, Eduardo Cazap, Mary Gospodarowicz, Tezer Kutluk and from the end of 2016, Sanchia Aranda - who have all provided the energy and vision to lead UICC through its recent stages of growth. They have carefully set out a long-term agenda and worked with the Board and the team in Geneva to guide it through rapid change. We are proud to have worked with such inspirational people.

So what next? Well, the next three years' plans have been written and the Board has signed them off. We will invest more of our time building our ability to help UICC members do, as Tezer describes it, “a better job tomorrow than they do today”, and this will manifest itself in different ways. On top of the fellowship and workshop programmes we have run successfully for many years, we will invest in leadership and partnership training, running more master courses, securing funds for our members and enhancing our ability to share toolkits, guidelines and training materials.

Our advocacy agenda will be a combination of follow-through on previous wins and a new agenda highlighting the treatment imperative in low- and middle-income countries with a focus on city readiness. And, of course, we will continue to invest in growing World Cancer Day, the Congress and the Summit – the design and delivery of which will be done with and through our membership.

May I thank the UICC team in Geneva, our members, partners and others who have worked with us in 2015. I think we all found opportunity to contribute and delight in the work we have undertaken on behalf of our members.

As satisfying as the year was, we know that we have much to do. The cancer burden globally is not reducing. The number of preventable deaths continues to rise. The inequity is getting wider. UICC and its members and partners have a lot to do, but I am confident that we can work more effectively in partnership in the coming years to achieve the impact we want to have.

Cary Adams, Chief Executive Officer
Union for International Cancer Control (UICC)
Advocacy milestones

2009
- NCD Alliance formed (International Diabetes Federation, World Heart Federation, UICC) (May)
- Campaign launched for UN High-level Meeting on NCDs (Mid-2010)
- NCD Alliance welcomes The International Union Against Tuberculosis and Lung Disease (The Union) as 4th Partner (May)

2010
- First global Ministerial Conference on healthy lifestyles and NCDs control, Moscow, Russia (Apr)
- Civil Society Interactive Hearing on NCDs (Jun)
- UN High-level Meeting on NCDs and Adoption of UN Political Declaration on NCDs (Sep)
- Global Roundtable Series (GRS), ‘Pause for Thought: A review of the UN Summit and supporting govt. to live up to their commitments,’ New York, United States (Sep)
- ‘CAN25by25’ Advocacy Network launched (Oct)
- 2011 World Cancer Leaders’ Summit, ‘From Resolution to Action’, Dublin, Ireland (Nov)

2011
- WHO Global Monitoring Framework (GMF) on NCDs agreed (Nov)

2012
- Global Roundtable Series (GRS), ‘Personalised cancer medicine’, Alexandria, United States (Jan)
- Global Roundtable Series (GRS), ‘Understanding and curing prostate cancer: Important issues, patient knowledge, and support for prostate cancer research’, Houston, United States (Apr)
- 66th World Health Assembly – WHO Global Action Plan (GAP) on NCDs 2013-2020 adopted (May)
- Global Roundtable Series (GRS), ‘A unique opportunity to transform our knowledge of cancer’, Geneva, Switzerland (Jun)
- UN ECOSOC Meeting – Establishment of the UN Interagency Taskforce on NCDs (Jul)
- UN General Assembly MDG Review Summit (Sep)
- 2013 World Cancer Leaders’ Summit, ‘Closing the Cancer Divide by 2025’, Cape Town, South Africa (Nov)

2013
- Global Roundtable Series (GRS), ‘Australia and New Zealand’s role in the cancer and NCD Development agenda in the (Asia-Pacific) Region’, Melbourne, Australia (Feb)
- NCD Alliance expands to 7 partners and welcomes Alzheimers Disease International (ADI), Management Sciences for Health (MSH) and Framework Convention Alliance (Mid-2014)

2014
- Global Roundtable Series (GRS), ‘UICC became a formally recognised NGO partner of UNODC (Mid-2014)
- 67th World Health Assembly – Adoption of palliative care resolution & Terms of Reference for the Global Coordination Mechanism (GCM) on NCDs (May)
- UN Informal Interactive Civil Society Hearing on progress achieved in the prevention and control of NCDs (Jun)
- UN High-level Review and Assessment of progress achieved in the prevention and control of NCDs and adoption of Outcomes Document (Jul)

2015
- New edition of the WHO Model List of Essential Medicines (EML) published, following UICC-led review process of cancer medicines (May)
- 68th World Health Assembly - Adoption of resolution recognising surgery and anaesthesia as essential components of universal health coverage (UHC) (May)
- WHO lays out plans for financing new global health goal: to ensure healthy lives and promote well-being for all at all ages (Jul)
- UN General Assembly adopts Agenda 2030, officially recognises NCDs as a development issue for the first time (Target 3.4) (Sep)
- Global Roundtable Series (GRS), ‘Access to essential cancer medicines’, Geneva, Switzerland (Sep)
In 2015 UICC saw an 11.5% increase in membership, closing off the year with 906 members in 154 countries and continuing to actively work to have a member in every country. We are also grateful to members who have contributed in growing our cancer control network by sponsoring other members and giving an opportunity for other organisations to engage in our global activities.
With an ever-growing membership base of this size, it is important we continually remind ourselves that while we may have goals of expansion, our ambition is still firmly rooted in the outcomes that can be achieved through our network. In the end, quality of engagement outweighs quantity.

To increase our knowledge and engage with our members, in the autumn of 2015 UICC conducted a membership survey to measure our progress since the last survey in 2013. Our goals were to better understand the needs and expectations of our members so that we could improve our services. The responses provide us with a base for targeted actions in the future and we thank all who participated, and those who helped encourage participation.

There were many important takeaways from this survey which will help steer our interactions with members and evaluate our current focus areas. We were particularly pleased that 90% of our respondents said they would recommend UICC membership to another organisation. Additionally, 78% also reported being satisfied or very satisfied with their UICC membership. Both have increased since 2013.

We hope to continue engaging with our members in an effective manner and to unite the work of the global cancer community.

The survey also identified several key issues that our members voiced as areas where they would like to see UICC do more. Based on that feedback, we will be taking steps to provide additional one-to-one communication from UICC representatives, as well as raise awareness on our offered resources and benefits.

The results of this survey show us that we have made major improvements over the past two years, but there is still work to be done. We will continue to strive for improvement, and we will be sharing this progress with members over the coming year.
From our members
Comments shared in the members’ survey:

“I view UICC as THE important main player in international cancer collaboration.”

“UICC and the World Cancer Congress participation have presented the opportunity to network with our peers from all over the world. Furthermore, World Cancer Day organised by UICC has provided a springboard for promoting cancer prevention in our country.”

“We consider UICC support as a key tool for our organisation.”

“UICC is a true crusader for cancer control at a global level. The working attitude of the organisation is always very positive and helpful, and UICC can be relied upon to produce and share new literature, resources, and initiatives from and with its members. Overall, it is a pleasure to be associated with UICC. All the best and please keep it up, as still there is a long way to go in the fight against cancer.”
PARTNERSHIPS

Hand in hand to drive change on a global scale

In the last few years, UICC has deliberately and effectively built a group of active partners with whom we work to strategically achieve the World Cancer Declaration* targets. We believe that cancer cannot be addressed by one community alone – it demands engagement from civil society, governments, the private sector and the general public. We all have a role to play alone and collaboratively. There is clear value in these relationships by providing topic-related expertise, access to resources and/or financial support, and by association with their known, credible reputations within their industry, networks and the general public. The importance of networks cannot be overstated; partners give UICC access to communities we would otherwise struggle to reach, thereby expanding our scope and impact.

Our current fundraising campaign ‘Together for Action’ has successfully engaged 52 partners from across our membership and the private sector in the last 6 years. In 2015, we have seen a significant increase in their engagement across UICC’s convening activities and the relationship with our members, resulting in more complex and mutually beneficial partnerships. We thank all our partners for their commitment, energy and support.

Within this report we take the opportunity to feature some partners and the work they undertake globally.

World Cancer Research Fund International, a member since 2005 and a UICC partner since 2011, has been active in supporting World Cancer Day and our advocacy priorities. Experts in cancer risk factors and nutrition, WCRF International has provided invaluable insight in this area as UICC advocates at the global level.

Roche, a leading pharmaceutical company, has been a longstanding partner of UICC, working with us on different streams of work in advocacy, convening and capacity building with a focus on women’s cancers. At our World Cancer Leaders’ Summit in Istanbul, Roche delivered an inspirational speech on the need for increased shared value in multi-sector partnerships to deliver long-lasting impact in healthcare. They also convened a session on the pivotal role of women in driving positive change in oncology. Roche is also a dedicated supporter of World Cancer Day.

Astellas, a leading pharmaceutical company, has been a UICC partner since 2011. Their mission is to contribute towards improving the health of the world, and their support enables UICC to fight for more prevention, early detection, access to treatment and palliative care for cancer patients globally.

Merck & Co. / MSD (Merck), a leading pharmaceutical company, has been a partner of UICC for years but in 2015 increased their long-term engagement across UICC priorities. Merck sees the value of collaboration that together we can accomplish more in global cancer control; simultaneously through Merck’s reputation and networks UICC has gained access to new communities.

To manage the growing portfolio of partners and to ensure that UICC operates effectively in the context of conflict of interest, the UICC Board of Directors has approved a refreshed due diligence process to guarantee partnerships are built on mutual respect, cooperation, dedication, communication, transparency and productivity. The process bears in mind the need to protect UICC and potential partners from various forms of risks such as conflict of interest, reputational, financial and compliance. We are content that the UICC governance model and the due diligence we undertake ensures that UICC works positively and effectively with all its partners – United Nations agencies, NGOs, foundations, government bodies and the private sector. We pride ourselves on what we achieve together.

*Please visit www.uicc.org/world-cancer-declaration for more information about the Declaration.
MAXIMISING OUR IMPACT THROUGH STRATEGIC PARTNERSHIPS

UICC enjoys strategic partnerships with some of the most influential international organisations that help drive action in our priority areas of convening, advocacy and capacity building.

We wholeheartedly believe that strong strategic partnerships are central to achieving the World Cancer Declaration vision, and as such have successfully partnered with UN agencies to establish the World Cancer Leaders’ Summit as a key advocacy platform. Progress over the last five years has emphasised this through the development of strategic partnerships that now drive global initiatives in cancer control.

UICC continues to maintain key relationships such as Economic and Social Council (ECOSOC) status with the United Nations, official relations with the World Health Organization (WHO) and United Nations Office for Drugs and Crime (UNODC). As we move into the next phase of growth at UICC, alliances and networks will play a strong role in increasing our impact across the three priority areas of convening, capacity building and advocacy.

International Agency on Research in Cancer (IARC)

UICC’s strategic partnership with IARC has focused on the need to develop cancer surveillance networks as a fundamental tool for targeting effective investments in cancer. Building on the inclusion of cancer incidence as an indicator in the Global Action Plan for the Prevention and Control of NCDs (2013-2020), IARC, the American Cancer Society (ACS) and UICC launched an updated Cancer Atlas depicting these data. UICC members took the lead in launching translated versions of the Cancer Atlas in 2015, which is now available in seven languages.

IARC is also the lead agency for the Global Initiative on Cancer Registry Development (GICR). The GICR partnership provides guidance, resources, and technical assistance to countries wishing to establish and expand their population-based cancer registration capacity. UICC has supported this work through workshops with a number of the GICR locations, with a specific focus on those in Latin America and Sub-Saharan Africa, to help build active networks.

International Atomic Energy Agency (IAEA)

September 2015 saw the publication of the much anticipated Lancet Oncology commission on Expanding Global Access to Radiotherapy which was a joint project with the UICC-launched Global Task Force on Radiotherapy for Cancer Control (GTFRCC) which worked in close collaboration with IAEA.

The commission concluded that:

- Investment in radiotherapy not only saves lives but brings measureable economic benefits.
- 50-60% of all patients with cancer need radiotherapy, but equity in access around the world is poor.
- Across the spectrum of countries and investment scenarios modelled, the report found that non-treatment of cancer is more expensive than the effective and sustainable implementation of radiotherapy services.
- Conservative estimates demonstrated that scaling up radiotherapy would cost USD 184bn across all low- and middle-income countries and would save nearly 30 million life years, delivering a global net benefit of USD 278.1bn by 2035 and thereafter.

The commission concluded with a clear five-point call to action which urges organisations, including IAEA and UICC, to follow through on the commission’s recommendations and ensure that radiotherapy is viewed as a cost-justifiable investment for all countries intent on cancer control.

The report is available from Lancet Oncology at www.thelancet.com/journals/lanonc/article/PIIS1470-2045(15)00222-3/abstract
CONVENING

UIICC convenes the global cancer community through three signature events aimed at driving action on a global scale. Each is aligned with our long-term strategic vision to hold the world to account, provide resources for impact and mobilise a movement.

World Cancer Congress

UIICC and its host organisations, the French League against Cancer (La Ligue contre le Cancer) and the Alliance of African & Mediterranean French Speaking Leagues Against Cancer (ALIAM) have actively been preparing for the 2016 World Cancer Congress which will be held in Paris, France - from 31 October to 3 November 2016 at the Palais des congrès.

In recent years, best practice sharing in cancer control has been central to the Congress, with a focus on implementation science. This evolving strategy has strengthened the event’s standing amongst the global cancer community and positioned it as the leading international conference in cancer control.

The Congress programme will comprise five overarching tracks, including the exciting new addition of a capacity building track, reflecting UIICC’s ambition to focus on this area for its members in coming years. 80 sessions have been designed for the programme, drawn from a record 278 sessions which were submitted from 70 countries. For a wider appeal amongst the francophone community, simultaneous translation into French will be widely available at the Congress.

The Paris week will offer delegates interactive sessions, discussions with world-leading experts, debates, roundtables, training initiatives, networking events as well as the UIICC General Assembly for UIICC members. This dynamic format will foster a unique learning and sharing environment for the expected 3,500 delegates. At the end of 2015, we already had 1,000 delegates registered for what promises to be the best World Cancer Congress to date.

Follow the latest news such as the Preliminary Programme, planned activities and registration offers on worldcancercongress.org.

The French League against Cancer (La Ligue) is hosting the 2016 World Cancer Congress in Paris, which has propelled their engagement with UIICC to new heights. UIICC has long since counted La Ligue amongst one of its most influential members, notably because of its leadership in helping increasing our presence in francophone Africa. We look forward to our partnership continuing far beyond their role as hosts of the 2016 World Cancer Congress, which we are assured will be an outstanding event.

“We on behalf of the Programme Committee, we very much appreciate that there is considerable thought and effort in preparing and submitting a session for the Congress. All the merged proposals have come back as even stronger sessions which we believe will be of greater benefit to the attending audience. This process is unique to the World Cancer Congress and so it is especially commendable that those involved have shown commitment to high quality outcomes and collaboration with colleagues in cancer and NCD control internationally. The process also invites greater cooperation and improves connections and to that end may be a worthwhile exercise in and of itself. But this only works due to the goodwill and dedication of the cancer control professionals worldwide who contribute to the work of UIICC. With this in mind I am keen to express my gratitude and appreciation to those who have taken on this challenge in a constructive and cooperative manner.”

Terry Slevin, Director Education and Research, Cancer Council Western Australia; 2016 Programme Committee Member
World Cancer Day

On 4 February 2015, UICC marked World Cancer Day collaboratively with its many members, partners and supporters around the world, breaking previous records and culminating in nearly 11 billion opportunities to see, hear or read about World Cancer Day across all media.

The campaign focused on taking a positive and proactive approach to the fight against cancer using the tagline ‘Not beyond us’. It explored how we can implement what we already know in the areas of prevention, early detection, treatment and care, and in turn, open up to the exciting prospect that we can impact the global cancer burden – for the better.

Through the hundreds of activities and initiatives that took place around the globe, we were able to show that there is much that can be done at an individual, community and governmental level to harness and mobilise these solutions and catalyse positive change.

Since World Cancer Day was restructured in 2012 we have seen exponential growth in the campaign’s success. We have been particularly delighted by the active participation of UICC members, partners and stakeholders, whose feedback has steered us to continue to increase public-facing exposure and engagement.

The World Cancer Day campaign model is responding to this call by rolling out a two prong strategy, building on the momentum of our existing networks whilst strengthening the foundations for individual and public level engagement.

In late 2015, the new three-year campaign was launched. For the next three years, World Cancer Day will run under the tagline ‘We can. I can.’ and shows how everyone, collectively or as individuals, can do their part to reduce the global burden of cancer.

Partners
Amgen, Bristol-Myers Squibb, Dutch Cancer Society, Eli Lilly, Roche, World Cancer Research Fund International

Since Bristol-Myers Squibb (BMS), a leading global biopharma company, became a partner of UICC in 2012, they have been very supportive of our advocacy initiatives aiming to put cancer on the global health and development agenda. BMS has also been actively supporting and engaging in our convening platforms such as the World Cancer Congress and World Cancer Day to show their commitment to making a difference in the lives of patients living with cancer. This year, BMS has committed to becoming a Visionary Partner of our World Cancer Day 2016-2018 “We can. I can.” campaign.

“World Cancer Day provides a global platform where all cancer advocates around the world unite to adhere to one great cause. This year, Friends of Cancer Patients, along with other cancer advocacy entities joined UICC’s efforts to present a collage of diverse inspirational events worldwide and help spread hope and awareness.”

Ameera Abdul Rahim Binkaram, President, Friends of Cancer Patients, UAE

World Cancer Leaders’ Summit

250 leaders and executives from cancer organisations, UN agencies, Ministries of Health, academia and the private sector positively responded to the call for ‘Effective International Collaboration’, prompted by the 2015 World Cancer Leaders’ Summit which took place in November in Istanbul, Turkey.

A UICC Partners’ Day also complemented this year’s Summit, opening up the dialogue on ways to improve collaboration through public–private partnerships with a series of interactive sessions run by UICC partners and members.

The Summit Day emphasised the importance of building meaningful partnerships as we enter a new era of international development. The participants were engaged in robust discussions covering the building blocks that should support collaborative action around cancer and NCDs.

Plenary speaker, Gary Cohen, Executive Vice President, Global Health & Development, Becton, Dickinson & Co., outlined the shared value model which leads companies to include community needs as part of their business objectives, with the aim to create substantive impact. Sania Nishtar, Founder and President, Heartfile, and former Federal Minister of Health for Pakistan, explained why the effective management of conflict of interest is the basis for implementing great collaboration and partnership.

Other speakers highlighted successful, concerted approaches to deliver national cancer control planning, childhood cancer integration in health and primary care services and effective national NCD alliances. Case studies on managing conflict of interest and on overcoming the challenges in data sharing and in working effectively were also covered.

The day ended with Michael Hübel from the EU Commission who highlighted the EU actions to tackle cancer and to support the Members States in reducing cancer incidence by 15% by 2020.

The Summit re-confirmed the essential components of effective partnerships – openness and clarity in the role of the partners; a shared vision and ambition; rules of engagement and transparency of roles; a shared plan and commitment to action and impact.

UICC also launched its Young Leaders Programme in conjunction with the 2015 World Cancer Leaders’ Summit, awarding eight individuals with the opportunity to attend the events in Istanbul, build networks and voice their generation’s viewpoints within high-level circles.

We thank our sponsors and our Summit host, the Turkish Association for Cancer Research and Control, for their ongoing support and commitment. A special thanks also goes to our guests: Her Highness Sheikha Jawahar Bint Mohammed Al Quasimi, Wife of the Ruler of Sharjah, UAE, Founder and Patron of Friends of Cancer Patients, UAE International Ambassador of the World Cancer Declaration for UICC and International Ambassador for Childhood Cancer for UICC; Her Royal Highness Princess Dina Mired of Jordan; the Honourable Dr Mehmet Müezzinoglu, Minister of Health, Turkey, and His Excellency Abdul Rahman Bin Mohammed Al Owais, Minister of Health, United Arab Emirates.

The 2016 Summit will take place on 31 October in Paris, in conjunction with the World Cancer Congress. The event will assess the progress made against the 2025 World Cancer Declaration goals and targets and will be entitled ‘Tomorrow is now: our journey to 2025’.

Partners

World Cancer Leaders’ Summit

The Republic of Turkey Promotion Fund, the Cancer Control Department within the Turkish Ministry of Health, the Turkish Association for Cancer Research and Control, the American Cancer Society, the Canadian Partnership Against Cancer, Cancer Research UK, the Irish Cancer Society, Macmillan Cancer Support, MD Anderson Cancer Center, the National Cancer Institute US, the Prevent Cancer Foundation, the Turkish Pediatric Oncology Group, the Turkish Society of Medical Oncology, the Turkish Society of Radiation Oncology and UNICANCER

Partners’ Day

Bupa, Merck Serono, Novartis Oncology, Roche

Merck Group, a leading pharmaceutical company, became a partner of UICC in 2015 and has been very active in leveraging the different engagement opportunities throughout the year. Merck Serono chose the UICC Partners’ Day at the World Cancer Leaders’ Summit in Istanbul to host a discussion highlighting how public–private partnerships spur innovation in oncology treatment and how partnerships can combat inequalities in access, availability and affordability of cancer treatment.
The Canadian Cancer Society has been a strong and highly valued UICC member since 1964 and partner since 2010. Under the leadership of Pamela Fralick, we are pleased to work together to harness the impact of the Canadian cancer community at a global level. They have actively championed for greater equity with UICC and provided travel grants for young leaders to attend UICC’s convening events, including the World Cancer Leaders’ Summit.
Promoting greater equity
RESOURCES AND NETWORKS

UICC plays a unique role in convening influential partners to drive action in priority areas through the sharing of best practice and key resources.

NCD Alliance

UICC is a founding member of the NCD Alliance and celebrated an incredibly successful year with the team. 2015 saw the first Global NCD Alliance Forum, hosted in Sharjah, alongside the culmination of a six-year campaign to see NCDs included in the Sustainable Development Goals which were agreed at the United Nations in September and will apply from 2016-2030.

UICC continues to see the integration of NCDs as a priority in global, regional and national health and development planning and implementation. We will take a full role in working with NCD Alliance partners to press for adequate and sustainable financial and human resources for NCDs globally. This will involve working with UICC members to improve the capacity and sustainability of national and regional civil society alliances and networks in low- and middle-income countries to effectively influence cancer and other NCD prevention and control.

For more about the work of the NCD Alliance during 2015, please go to page 32 and visit www.ncdalliance.org.

International Cancer Control Partnership (ICCP)

Since 2012, the International Cancer Control Partnership (ICCP) has brought together over twenty organisations to coordinate activities and resources to enhance global cancer control. ICCP’s core initiatives include the Cancer Control Leadership Fora and the ICCP Portal, which has compiled over 200 published national NCD and cancer control plans to help facilitate global knowledge sharing across the cancer and NCD communities. Other resources available within the portal include the breast cancer knowledge summaries, WHO country cancer profiles and the 2nd edition of the Cancer Atlas in its different translations, all of which can be accessed at www.iccp-portal.org.
McCabe Centre for Law and Cancer

2015 was another very successful year for the McCabe Centre for Law and Cancer. It continued to scale up its international legal training and capacity building programmes, broaden its regional networks, and expand the scope of its work on international and domestic legal issues across the spectrum of cancer prevention, treatment and care.

Together with its partners, the Centre ran a number of major training and capacity-building events – in Melbourne, Australia (with the WHO and the Secretariat to the WHO Framework Convention on Tobacco Control (WHO FCTC)); in Nairobi, Kenya (with the WHO Regional Office for Africa); in Oslo, Norway (with the Norwegian Ministry of Health and Care Services and the Norwegian Cancer Society); and in Batam, Indonesia (with the WHO’s Regional Office for South East Asia and Country Office for Indonesia).

Each McCabe event explores a wide range of legal issues relating to cancer/NCD prevention, treatment and care, across policy development, legislative and regulatory reform, and litigation. It was emphasised the importance of understanding the relationships between the diverse areas of health, trade, investment, sustainable development and human rights, and developing coherence and collaboration across government ministries and across sectors of societies. Tobacco control remained an important focus, particularly the lessons from Australia’s introduction of tobacco plain packaging laws and its defence of these laws against legal challenges in domestic and international jurisdictions. In this respect, the Centre continues to support the WHO’s Framework Convention for Tobacco Control Secretariat to advise and support countries in responding to legal threats or lawsuits from the tobacco industry.

The results of McCabe’s work can be seen in the form of new laws and regulations being enacted in countries which it is working with; in the way countries are defending litigation against their tobacco control laws; in the training participants taking on leading roles in training and law reform in their own countries and regions; and in other partners addressing legal issues in their policy and advocacy work.

The McCabe Centre is supported by the Australian Department of Foreign Affairs and Trade and Cancer Council Australia, and those who have supported the participation of additional participants (ACS CAN, Campaign for Tobacco-Free Kids, the Norwegian Ministry of Foreign Affairs, the Secretariat to the WHO FCTC, the WHO Regional Offices for Africa, the Eastern Mediterranean and the Western Pacific), and the William L Rudder Trust.

Global CMO (Chief Medical Officer) Network

UICC has been privileged to work with our partner Bupa in developing the Global CMO Network which was launched at the Clinton Global Initiative meeting in September 2014. Since then, with Bupa driving its development, the network has grown to more than 50 Chief Medical Officers from major international companies including IBM, Bayer, Citi Bank and others. These influential individuals are coming together to see how their collective experience, skills and reach can improve the way in which health is addressed in companies around the world. This is a very exciting initiative which UICC is very proud to support and promote globally.

Bupa, a UK-based health insurance company, and UICC have been working in partnership for the last three years and in 2014, engaged in an ambitious project to make a substantive contribution to the delivery of the WHO “25 by 25” target by tapping into the major opportunity workplaces represent in tackling cancer. In 2015, we scaled up the comprehensive package of practical resources for employers around the delivery of cancer initiatives as part of a broader approach to employee health and wellbeing, which included publication of a new report ‘Cancer, It’s everyone’s business’ and a series of six guides around tobacco cessation, women’s cancers, and supporting people with cancer to return to work. We also worked with Bupa to establish the Global CMO (Chief Medical Officer) Network, which brings together CMOs from major international companies to implement coordinated programmes which will improve the health of employees around the world.
TNM Classification of Malignant Tumours

The stage of cancer at diagnosis is an increasingly important component of cancer surveillance and cancer control, as well as an endpoint for the evaluation of population-based screening and early detection efforts.

Integration of staging and reporting into cancer surveillance is an important step as cancer control strategies are scaled up.

Through the support of numerous cancer experts from around the globe, UICC has been convening volunteers to achieve and publish the TNM Classification of Malignant Tumours for over 50 years, an internationally accepted standard for cancer staging.

In 2015 the 9th edition of the Manual of Clinical Oncology was published, and to acknowledge the rising need and reach of e-learning, a set of TNM training modules was launched with e-Cancer, the online oncology channel. Six modules are now available from ecancer.org, free of charge: The TNM Classification System, the TNM Classification Breast, Cervix, Prostate, Colorectal, and Lip and Oral Cavity.

In 2016 UICC will publish the 8th edition of the TNM Classification and a new TNM e-learning module on lung cancer.

UICC provides the new editions of the TNM classification free to everyone in as many languages as we can arrange. Today the classification is available in Arabic, Chinese, Czech, French, German, Italian, Japanese, Latvian, Polish, Portuguese, Russian and Turkish.

Partners
Centers for Disease Control and Prevention USA, Wiley

Journal of Global Oncology (JGO)
UICC launched the online-only Journal of Global Oncology (JGO) in partnership with the American Society of Clinical Oncology (ASCO) in 2015. This journal is open-access and is published bi-monthly.

The JGO provides a new platform for sharing innovations, best practice, and programmatic success in cancer control in settings with limited healthcare resources. This is the first peer-reviewed journal dedicated to this crucial area of cancer control and has strong ambitions to be a key tool for addressing global issues experienced across the cancer community.

Since its launch in October 2015, articles have covered the whole spectrum of cancer control, from effectiveness of prevention to side-effects of novel cancer drugs and the implementation and improving of palliative care in low-resource settings.

Together with UICC’s network of members in 154 countries, and ASCO’s 35,000 international members, the Journal has a significant potential global reach, with the two organisations working together to solicit high-quality original research, secure funding, and promote the Journal to their respective networks. Through this collaboration, ASCO and UICC will meet a growing need for high-quality clinical cancer research in LMICs by providing a peer-review platform focused on the challenges faced by researchers and care providers in these countries.

Partners
American Society of Clinical Oncology, Conquer Cancer Foundation of the American Society of Clinical Oncology, Doris Duke Charitable Foundation, Novartis Oncology

International Journal of Cancer (IJC)
The International Journal of Cancer is universally recognised as a leading publication for original papers and review articles covering the full spectrum of topics in clinical and experimental cancer research.

An official publication of UICC, the Journal concentrates on fundamental studies that improve our understanding of the mechanisms of human cancer and shed new light on effective diagnostic tools and treatments. In 2015, IJC’s impact factor increased to 5.085 and is ranked as 31 out of over 200 oncology journals by the ISI Journal Citation Report. The International Journal of Cancer publishes in 24 issues per year and is available in print through John Wiley & Sons.
CAPACITY BUILDING PROJECTS

From Roadmap 2 to Roadmap 3

In 2012, the UICC Board of Directors set out ‘Roadmap 2’, a four-year plan which aimed to improve the way UICC fulfilled its purpose statement by focusing its efforts in advocacy, convening and running capacity building projects. It was an ambitious plan, which was reviewed on a regular basis and delivered with great satisfaction during that period of time. An infographic plotting the high-level results for the period 2012-2015 is shown on page 8 of this report.

During 2015, the Board of Directors and the UICC management team defined our ambitions for 2016-2018, named ‘Roadmap 3’. We will again be active in global advocacy and convening (increasing the impact of World Cancer Day, the World Cancer Congress and the World Cancer Leaders’ Summit) but you will note a growing focus on our capacity building activities as outlined by Tezer Kutluk, our President, in the introduction to this Annual Activity Report. We will develop a wider range of capacity building initiatives which help UICC members “do a better job tomorrow, than they do today”. We will distribute more funds, arrange more fellowships and workshops, develop an online training platform and extend our growing resource base so that UICC members have access to training, funds, tools and guidelines which help them deliver the impact they wish to have locally.

UICC would like to thank Fondation Philanthropia for their very generous contribution to help UICC establish its new Capacity Building team and initiatives.

Fondation Philanthropia, a partner of UICC since 2011, is the philanthropic foundation of Lombard Odier & Cie, the oldest private banking firm in Geneva and one of the largest in Europe. Fondation Philanthropia invests in strategic impact, and as such has been a staunch supporter of UICC’s capacity building initiatives previously through the Cervical Cancer Initiative, and Global Access to Pain Relief Initiative. Fondation Philanthropia is demonstrating this sincere commitment by currently contributing to UICC’s expansion of our internal Capacity Building team so that we can enhance our members’ efficacy and impact.

“Fondation Philanthropia is delighted to work with our UICC partners to address cancer globally. Investing in the organisation’s capacity building plans means that we are impacting more cancer organisations around the world and helping them improve their skills and competencies. We represent a range of philanthropists committed to tackling the staggering burden of cancer and are convinced that new approaches should be championed, and consider capacity to be a critical component.”

Luc Giraud-Guigues, Head of Philanthropy, Fondation Philanthropia
Childhood Cancer

Challenge

Unlike many adult cancers, most paediatric cancers are not associated with modifiable risk factors and are not amenable to population-based screening and prevention programmes. Decreasing childhood cancer mortality thus requires accurate and timely diagnosis followed by effective treatment. Fortunately, such treatment exists and in high-income countries over 80% of children with malignancies are cured. The survival rate for children with cancer in many LMICs is however dramatically lower, ranging from 10% to 60% across settings. Improving care for LMIC children with cancer will require addressing several challenges: low levels of awareness and knowledge of childhood cancer among health workers; weak or non-existent referral systems for diagnosis, treatment, and care; insufficient human and infrastructural capacity; inconsistent availability of chemotherapeutic and pain relief drugs; lack of paediatric cancer registries and an absence of national childhood cancer control strategies.

UICC’s response

Signs and Symptoms Campaign

In partnership with Childhood Cancer International (CCI) and the International Society of Paediatric Oncology (SIOP), UICC released a series of videos as the second set of materials for its three-year ‘Signs and Symptoms’ Campaign. The campaign, targeted at primary and community healthcare workers, was launched to raise awareness on early warning signs of childhood cancer. Posters and pocket cards with key early warning signs of cancer were also produced and have since been translated into over 40 languages and used in various countries, including as part of national awareness campaigns.

Key activities in 2015

- **Launch of the Childhood Cancer Fund.** At a special event which took place in May in Geneva, the International Childhood Cancer Fund, a first of its kind initiative, was launched by Sheikha Jawaher bint Mohammed Al Qasimi, Wife of H.H. the Ruler of Sharjah, Founder and Royal Patron of the Friends of Cancer Patients Society and UICC International Ambassador for the World Cancer Declaration and Childhood Cancer.

- **Paediatric oncology staging guidelines.** UICC participated in a group of international experts and advocacy stakeholders for consensus building around key principles to guide the collection of childhood cancer stage by population-based cancer registries, and based upon these principles, which staging systems need be used by cancer registries for major childhood malignancies. The resultant paediatric cancer stage guidelines have been endorsed by the UICC TNM Staging Committee.

- **Leading up to the ten-year anniversary of My Child Matters,** the successful collaboration between UICC and Sanofi Espoir Foundation (SEF) on childhood cancer, SEF presented key results of the initiative at the World Cancer Leaders’ Summit in Istanbul, Turkey. Since 2005, 45 projects in 33 countries have received support involving the mobilisation of stakeholders from clinicians and researchers, to civil society and Ministries of Health.

- **Brocher Foundation Workshop.** This workshop focused on best practice sharing towards developing a phased model framework for childhood cancer in the Latin American region.

**Partners**

Friends of Cancer Patients, Sanofi Espoir Foundation

Sanofi Espoir has been a partner of UICC since 2005 when we first began working together to deliver the long-standing childhood cancer initiative called ‘My Child Matters’. Sanofi Espoir is the corporate foundation of the pharmaceutical company Sanofi, and has a long history of commitment to improving maternal and neonatal health.
Cervical Cancer Initiative (CCI)

**Challenge**

Every year, more than 500,000 women worldwide are diagnosed with cervical cancer and approximately 266,000 succumb to the disease. In 2012, 87% of all deaths attributed to cervical cancer occurred in less developed countries.

**UICC’s Response**

In 2012, UICC launched its Cervical Cancer Initiative (CCI) with a focus on both country-level technical assistance and support for global advocacy to increase awareness and funding for cervical cancer prevention in low-resource settings. Country-level work began first with a pilot project in El Salvador in collaboration with local UICC member organisation, ASAPRECAN, the Ministry of Health, International Planned Parenthood Federation and Basic Health International.

In partnership with the Pan American Health Organization (PAHO), Centers for Disease Control and Prevention (CDC), PATH and others, UICC extended its work in Central America by providing support to the governments of Honduras, Nicaragua and Belize in generating or updating national guidelines in line with the new WHO prevention recommendations, healthcare provider training on the guidelines, support for south-south exchange and capacity building workshops for UICC members. A policy roundtable with representation across the region will close off this work, to share learning and develop an action plan to increase multi-sectoral support for national cervical cancer prevention and control programmes.

**Keys activities in 2015**

- National Cervical Cancer Guidelines were updated in El Salvador, Guatemala and Honduras
- The project led to screening of over 14,000 women through mobile clinics in El Salvador and over 200 health-care providers were trained in VIA, cryotherapy and HPV DNA testing.
- 3 specialised capacity building workshops for pathologists and nurses and 50 community-based information and education workshops were run
- 7 fellowships awarded to technical personnel to increase capacity in screening and treatment

**Partners**

American Society for Clinical Pathology, Dutch Cancer Society

Global Access to Pain Relief Initiative (GAPRI)

**Challenge**

80% of patients with terminal cancer are estimated to experience moderate to severe pain due to inequitable access to medicines. There are unacceptable disparities in the worldwide use of opioids for the treatment of pain: 93% of the world’s morphine supply is consumed in high-income countries while 70% of deaths from cancer occur in LMICs.

**UICC’s Response**

Working with its members and civil society partners, UICC garnered widespread support for the landmark Palliative Care Resolution adopted at the May 2014 World Health Assembly. Efforts since have focused on mobilising support at a national level to respond to the issue.

UICC is collaborating with the United Nations Office on Drugs and Crime (UNODC), the World Health Organization (WHO), and the International Narcotics Control Board (INCB) to improve knowledge of the problem and coordinate collaboration to implement solutions. 2016 will see a UN General Assembly Special Session on this topic, which represents a real opportunity to bring fresh momentum and investment for actions at national level. Meanwhile UICC presses for action to be taken in specific countries, including Ghana, which UNODC and WHO have identified as a priority.

Additionally, the joint GAPRI and American Cancer Society programme, ‘Treat the Pain’ has contributed to the availability of 2.8 million days of pain treatment in Nigeria, Kenya and Uganda.

“Cancer control is now a key priority in the health agenda in Honduras. This commitment would not have been possible without the support of UICC.”

Jacqueline Figeroa, Ministry of Health Honduras
Education and Training

Challenge

The global deficit of healthcare workers is at least 2.4 million, with low- and middle-income countries suffering the largest gap in workforce shortages whilst also facing the largest growing burden of cancer.

UICC’s Response

UICC has more than 50 years of experience in providing training and capacity building across the field of cancer control.

In 2015 UICC launched a new initiative: the SPARC MBC Challenge (Seeding Progress and Resources for the Cancer Community: Metastatic Breast Cancer Challenge). This SPARC initiative, which is supported by Pfizer, aims to empower advocacy groups, hospital networks, support groups and other organisations to address the unique challenges facing women with metastatic breast cancer worldwide. In total, 20 organisations from 18 countries were selected to receive grants and to develop their capacity to deliver their projects effectively.

UICC also continued to award fellowships and workshops across the world to promote greater equity in cancer care and increase the transfer of knowledge to those who need it most. Over the course of the last three years, more than 700 professionals from 70 countries have been trained. The fellowship offer has also been strengthened and diversified by implementing new initiatives with partners such as the International Agency for Research on Cancer (IARC), Chinese Anti-Cancer Association (CACA) and World Cancer Research Fund International (WCRF International).

Additionally, with the support of members and partners, the Master Courses offer has been further enhanced so that World Cancer Congress participants may benefit from highly specialised training in areas of high impact.

Partners

American Cancer Society, American Society of Clinical Oncology, Cancer Council Australia, Cancer Society of Finland, Danish Cancer Society, French League Against Cancer, Israel Cancer Society, National Cancer Institute USA, Pfizer, Swedish Cancer Society, Swiss League Against Cancer, UICC Japan.
The Global Initiative for Cancer Registry Development (GICR)

Challenge

Having an accurate picture of a country’s cancer burden is critical for effectively planning and implementing cancer prevention and control. Currently, some high-income countries benefit from cancer registries covering over 80% of the population, yet only one in five low- and middle-income countries have the necessary data to inform policy and reduce the burden and suffering due to cancer. The Global Initiative for Cancer Registry Development (GICR) is a coordinated, multi-partner approach to deliver the required change and make cancer data count and is driven by our partner, the International Agency for Cancer Research (IARC).

UICC’s Response

Launched in 2011, GICR now has six regional hubs or networks in place with associated agreements with local partners. With the financial support from the Dutch Cancer Society, UICC was able to take a lead in establishment of the Latin America network, supporting early training and recruitment.

UICC’s efforts have focused on supporting the GICR training of the Latin American and African Cancer Registry Networks and the Izmir and Mumbai hubs, with a total of 9 workshops and 7 fellowships over the last four years. 2015 saw the development of links between GICR and the TNM staging to create an essential stage initiative. In addition, UICC is supporting IARC for timely delivery of volume 3 of the International Incidence of Childhood Cancer Report in 2016.

Two investments on helping countries getting started have proven to be successful:

- **Paediatric cancer registry – as an entry point**
  Collaboration with the Dana Farber Cancer Institute (DFCI) led to the persuasion of Ministry representatives of Guatemala to take a first step in investing in cancer registration by initiating a paediatric cancer registry.

- **Investing in skills and leadership - Zambia**
  Zambia has been struggling to maintain a cancer registry and generate data for shaping national cancer plans with varying levels of ministry support in the past decade. While the need was recognised, the registry team was struggling with a data back log and no clear plan for establishing a population-based cancer registry in the Greater Lusaka district. UICC and the US National Cancer Institute’s Center for Global Health teamed up to provide a three-year fellowship in 2014 which would identify and support a cancer registrar, with conditions for the Ministry to continue financing the role after this time. Supported by the African Cancer Registry Network with training, mentorship and annual audits, 2015 saw the development of a plan for routine data-collection, training of key personnel and sharing of the first formal registry report with the Ministry of Health. The national Ministry of Health has already formally appointed the registrar to lead the Cancer Registry of Zambia with a commitment to making the Lusaka registry population-based with a minimum of 70% completion by the end of 2016.

Partners

Dutch Cancer Society, Friends of Cancer Patients, National Cancer Institute US

“...The fact that we had a reliable source of funds for establishing the Latin American hub over three years and continuing UICC support and drive behind it, meant that the IARC team was able to persist when times were hard, address a complex web of issues and get to where we are today - really understanding the status of each country in the region, having a great team in place delivering an ambitious three-year plan – thank you for your trust.”

Freddie Bray, Head of Cancer Information, International Agency for Research on Cancer (IARC)
Delivering a challenging and impactful global agenda
2015 has been a very successful year for UICC’s advocacy work. By far the biggest milestone was the adoption of the 2030 Sustainable Development agenda at the UN General Assembly which included non-communicable diseases in the global health and development agenda for the first time. This is the culmination of a six-year NCD Alliance campaign that UICC has helped drive from the start, and which formed the cornerstone of our CEO, Cary Adams’ role as Chair of the Alliance over the last three years.

Another advocacy focus in 2015 was to raise the profile of cancer health systems in alignment with the Global Action Plan for the Prevention and Control of NCDs (2013-2020), and particularly the target of 80% availability of essential medicines and technologies by 2025. UICC endeavoured to ensure that national cancer control plans articulate the multidisciplinary approach to treatment that is essential to achieving improved outcomes for cancer patients.

Building on the palliative care resolution of 2014, a 2015 World Health Assembly side event was held in partnership with WHO and supported by UICC board members. The discussions focused on the critical importance of surgery and radiotherapy as well as medicines for the treatment of cancer, with clear links to the resolution on strengthening access to essential surgical care and anaesthesia being debated at the Assembly in May.

Key activities in 2015:

Updating of the WHO Model Lists of Essential Medicines (EML) for adults and children

UICC was invited by WHO to convene a group of experts to review the list of cancer medicines included in the adult and children model EML lists. What followed was a global effort which engaged over 90 oncologists from around the world in a series of consultations in collaboration with UICC members, the Dana Farber Cancer Institute, the American Society of Clinical Oncology, the European Society for Medical Oncology and the International Society of Paediatric Oncology. The proposal was adopted and the WHO EML was updated to include 16 new cancer medicines - the largest single package increase since the list began in 1977.

These additions now take the total cancer medicines to 46 and introduced a disease-based decision-making framework. Similarly, the addition of 7 new medicines on the children’s EML means that 11 regimens for childhood cancers are now considered essential for all countries. The full list can be found at www.who.int/medicines/publications/essentialmedicines/en.

The Lancet Oncology Commission on Global Cancer Surgery

2015 welcomed the release of a Lancet/Lancet Oncology commission report which emphasised the investment case for multidisciplinary care and underlined the need for delivery of safe, affordable and timely cancer surgery, which is required in 80% of all cancer cases. A copy can be downloaded from Lancet Oncology www.thelancet.com/journals/lanonc/article/PIIS1470-2045(15)00223-5/abstract.

The Lancet Oncology Commission on Expanding Access to Radiotherapy

Under the leadership of UICC Immediate-past President Mary Gospodarowicz, the Global Task Force on Radiotherapy in Cancer Control (GTFRCC) launched a landmark publication which demonstrated the significant returns on investment in radiotherapy worldwide. This was also published as a Lancet/Lancet Oncology commission report in November 2015. A copy can be downloaded from Lancet Oncology www.thelancet.com/journals/lanonc/article/PIIS1470-2045(15)00222-3/abstract.
Launch of two key prevention initiatives

Cancer prevention remains important for UICC. In 2015 UICC was involved in the launch of two initiatives. In November, Cervical Cancer Action hosted a high-level conference in London called ‘Investing in Cervical Cancer Prevention 2015–2020’. The conference brought together key partners to take stock of recent global progress in cervical cancer prevention, spur expanded action and investment, and establish a consensus vision for what is required to meet our global goals and safeguard our commitments to the health of women and adolescent girls.

In April 2015 UICC established the Global Taskforce for Tobacco Free Portfolios (GTF.TFP) advisory group under the patronage of HRH Princess Dina Mired of Jordan. This Task Force aims to lead a global coalition of individuals and organisations to encourage, in the first instance, pension and superannuation funds to divest from tobacco stock in all countries. The initiative is run by Bronwyn King who is based in Melbourne, Australia. The GTF.TFP will report on progress at the 2016 World Cancer Congress in Paris.

Partners

American Cancer Society, Bayer, Canadian Cancer Society, Livestrong Foundation, National Cancer Institute US, Norwegian Cancer Society, Novartis, Swiss Cancer league, World Cancer Research Fund International
NCD Alliance

2015 was a year of unprecedented success for NCDs at global, regional and national levels, with the NCD Alliance and its federations leading the civil society response.

Following several years of concerted advocacy, the 2030 Agenda for Sustainable Development was adopted in September by governments in New York, and includes a dedicated target on NCDs. This reinforces NCDs as a sustainable development priority for all countries. Indeed, three of the nine health targets focus on NCD-related issues, which signals an evolution in global health priorities from those outlined in the Millennium Development Goals. Next steps will be to ensure that these global priorities are integrated into national development plans and that national responses are appropriately financed and monitored to ensure countries meet their commitments.

In November 2015, 200 representatives from NCD civil society came together for the first Global NCD Alliance Forum in Sharjah, UAE. The Forum was hosted by the NCD Alliance and Friends of Cancer Patients (a UICC member). The Forum was held under the patronage of Her Highness Sheikha Jawaher Bint Mohammed Al-Qassimi, Wife of the Ruler of Sharjah, Founder and Patron of the Friends of Cancer Patients Charity (FoCP), International Ambassador of the World Cancer Declaration for Union for International Cancer Control (UICC) and International Ambassador for Childhood Cancer for UICC.

In preparation of the Forum, the NCD Alliance worked in partnership with Regional Offices of the World Health Organization to host a series of five regional civil society meetings, and conducted a comprehensive situational analysis of national and regional NCD Alliances. The Forum provided a platform for knowledge exchange, capacity building, and priority setting, catalysed the formation of new alliances and culminated in the adoption of the Sharjah Declaration - a global expression of NCD civil society’s commitment to engage in advocacy and accountability to advance the NCD response.

A new NCD Alliance Strategic Plan 2016-2020 was developed following a comprehensive external review inviting views and opinions from those close to the Alliance in recent years. Based around four pillars of advocacy, accountability, capacity development and knowledge exchange, this plan fully reflects the increasing focus on translating global policy into national action; the realisation of internationally agreed goals and targets; engagement of actors beyond the traditional NCD space for a fully collaborative and integrated response; and the dissemination of best practice.

In September 2015, UICC handed over the Chair of the NCD Alliance to Jose Castro of the International Union Against Tuberculosis and Lung Disease. UICC remains committed to the Alliance for the next phase of its development and will continue to play an active role in all its work, including integrating NCDs into the 2016 World Cancer Congress programme.
UICC concluded the 2015 financial year in a positive position. We worked to a balanced budget in that all costs were covered by income received during the year.

During the last few years we have made significant efforts in diversifying our sources of income. In 2015 the membership dues, the contributions from partners for restricted activities and operations, the income for Congress and events, as well as royalties and publications continued to be our main income streams. All these sources strengthened, providing a solid and secure base to fund all our planned activities and our core operations.

We managed and controlled our costs in line with budgets throughout the year. Our main operational expense continued to be staff costs.

The team worked hard throughout the year to successfully deliver the 2015 business plan and complete all the planned activities in accordance with the requirements of the Board of Directors.

UICC continued to act as fiscal agent for the NCD Alliance. We are pleased to see that the Alliance has improved financially and we are committed to continue as the fiscal agent.

The full 2015 results will be added to this report after our scheduled audit in May 2016.
The Board of Directors governs UICC in accordance with the mandate given to it by the General Assembly of UICC members. It is empowered to provide leadership and strategic direction for all UICC activities. The Board is elected every two years by the General Assembly and the current Board has been in office since December 2014, when elections took place in Melbourne, Australia.

The Board is composed of 17 outstanding and committed individuals, representing all spectrums of cancer control. All Board members serve in their own personal capacity and not as representatives of their respective organisations or countries.

In the last few years, the Board of Directors has spent time developing a new purpose statement and a long term vision for UICC which has inspired the creation of the current business plan which runs from 2016 to 2020. To complement this ambition, the Board has also reviewed and renewed the UICC Governance Framework to ensure that the way in which we operate supports the delivery of our long term goals.

In 2015 the Board of Directors met three times (February, May and November). During the meetings and in between meetings their personal engagement is to be commended and UICC and its members take this opportunity to express our gratitude to all Board members for their on-going commitment and hard work.
**BOARD OF DIRECTORS**

**President**
Tezer Kutluk (Turkey)

**President-Elect**
Sanchia Aranda (Australia)

**Immediate Past President**
Mary Gospodarowicz (Canada)

**BOARD MEMBERS**

Benjamin O. Anderson (United States)
Heather Bryant (Canada)
Maira Caleffi (Brazil)
Anil D’Cruz (India)
Jeff Dunn (Australia)

Serigne Gueye (Senegal)
Xishan Hao (China)
Jamal Khader (Jordan)
Harpal Kumar (United Kingdom)
Gilbert Lenoir (France)

Tetsuo Noda (Japan)
Anne-Lise Ryel (Norway)
Saunthari Somasundaram (Malaysia)
Richard Sullivan (United Kingdom)
In 2015, the UICC team of 35 enthusiastic and talented individuals worked together towards achieving the goals set out in the business plan, under the leadership of the organisation’s Chief Executive Officer, Cary Adams.

In May, Cary was awarded ‘CEO of the year’ at the Associations World Congress, and accepted the award noting that: “it truly represented the efforts of an amazing team backed by a great Board of Directors.”

The UICC team in Geneva will be expanding in the next couple of years as we establish a new Capacity Building team, which will be responsible for working with UICC members and partners to deliver an increasing suite of products and services which help our members improve the way they operate in their own country. Capacity building will also feature in our World Cancer Congress in Paris as a new programme track, and UICC will integrate a call to action for capacity building in its advocacy agenda.

UICC uses ISO 3166-1 as a reference to name countries. ISO 3166-1 is part of the ISO 3166 standard published by the International Organization for Standardization (ISO), and defines codes for the names of countries, dependent territories, and special areas of geographical interest.
Our Partners

UICC thanks its portfolio of dedicated partners, without whom the organisation could not carry out its work.
