

Cervical Cancer

Elimination

Objective

In 2020, the World Health Organization approved a strategy aimed at eliminating cervical cancer worldwide within generations.

Cervical cancer will no longer be considered to be a public health problem when all countries reach an annual incidence rate of 4 cases per 100,000 women or less.

How

The strategy requires accelerated action in prevention, screening and cancer management.

- 1
- 2
- 3

HPV vaccination

Screening and early treatment of pre-cancerous lesions and

Prompt referral for treatment and palliative care of invasive cervical cancer

2030 Targets

90%

of girls **fully vaccinated** against HPV infections by age 15 years

70%

of women **screened with a high performance** test by age 35 and again by age 45

90%

of women identified with cervical cancer **receive treatment**
